

MERN Backend Detailed Notes

Flow: Frontend -> Route -> Controller -> Model -> MongoDB

Example 1: create()

```
Doctor.create({  
  name: 'Rahul',  
  email: 'rahul@gmail.com'  
});
```

Meaning: Doctor model uses create() to insert a new document into MongoDB.

Example 2: req.body

```
req.body = {  
  name: 'Aman',  
  email: 'aman@gmail.com',  
  password: '12345',  
  hospital: 'AIIMS'  
}
```

req.body contains data sent from the frontend form.

Example 3: const doctor = await Doctor.create(req.body);

Breakdown:

1. const doctor = Variable to store saved document.
2. await = Wait until MongoDB saves data.
3. Doctor = Mongoose Model.
4. create() = Built-in Mongoose method to create & save.
5. req.body = Form data from frontend.

After saving, doctor contains _id, timestamps and all fields.
